2. Citations and explanations (Rule 70.7)

D : J. Forster, E. Green, S. Somayazula and D. Leeper, "Ultra-Wideband Technology for Short or Medium Range Wireless Communications," Intel Technology Journal Q2, 2001

The claimed inventions disclose to an ultra wideband radio transmitter comprising a delay time controller, matched filters, an adder, a local oscillator, a mixer and an antenna multistage, and also disclose an ultra wideband radio receiver comprising an antenna, a local oscillator, a mixer, matched filters, a delay time measurer and a data decider.

The closest prior art D1 discloses an ultra wideband transceiver which could be used for a transceiver of the Bluetooth system at higher data rates and lower emitted radio frequency power.

The architecture of two antennas and the frequency converters of the claimed invention to avoid the 5GHz frequency band is not disclosed in D. The up/down converter of fig.4 in D is used for tuning to the pseudo random channel of the frequency hopping technique. Moreover, the feature of the claimed invention which dose not require a high-speed digital counter for the accurate pseudo random timing is not obvious to a person skilled in the art or is not suggested in the prior arts. Therefore, claims 1-11 of the inventions fulfill the requirement of novelty criteria of PCT Article 33(2) and the requirement of inventive step under PCT Article 33(3).
